

Amendments to the Specification:

Submitted herewith are marked-up and clean versions of a substitute specification for making certain amendments thereto. With reference to the page numbers of the marked-up substitute specification, amendments were made at page 7 to add brief descriptions of new Figures 1A and 1B, and to add a description of an inflatable detector comprising a balloon 9. At page 8, a paragraph was added (which is essentially identical to the original specification at page 2, lines 8-14) describing the cage form of the expandable detector. At page 9, second to last paragraph, language was added referring to external closures 34 and 35, which have been added to Figure 1. No new matter is being added by the amendments to the specification.
